INTRODUCTION

We are here today to talk to you about how MyClinic was created, who's benefiting from it already and how you can implement this kind of websites in your real life.

Objectives

01
Provide a safe and therapeutic environment for all patient, staff and visitors

02
Increase overall satisfaction rates of patients, employees and visiting medical officers

03
Maintain clinical indicators below aggregate rate for peer hospitals

04
Easy access to Doctors contact info, take appointments in simple way, review and modify your information.

Application

This is an application in which we suppose will be liked by its user. Some of the applications of our project are listed as below:

1. This project has been developed as a tool to make the patient life easier and simpler in the field of medication.

2. This project has been designed as suitable for all age targeted people.

3. This website can be used as health care applications with further improvements.

CONCLUSIONS

Hence ,conclusively, there is no doubt that this project was completed with a lots of intensive effort and time. As a whole, the project was a good learning experience for all of us. We gained knowledge and ideas on the various aspects of Database ,web programming as well as JS and PHP. Simultaneously, we developed a deep understanding about the whole websites concept and its enhanced features. Skills of genuine teamwork was one of the significant thing learnt during the project development.
